

Unifyfy

Skype for Business

Room System Software

Microsoft Exchange

See your Exchange and/or Google calendar from a single view. As users invite your Conference Room resources to meetings, Unifyfy's Schedule Bar automatically stays up to date and displays the upcoming meetings in easy to see and select format.

Easily add your personal exchange calendar to the conference room dashboard. Password protect attachments included with your exchange meetings.

3rd Party Integrations

Organizations investing in collaboration, more often than not, rely on Lync. However, Lync in the Conference Room has few options, and they are all over three times more expensive than Unifyfy. And they ONLY do Lync!

Out of the box support for: GoToMeeting, WebEX, Zoom.US and of course Skype for Business. Unifyfy was built to easily add support for your teams favorite collaboration tools.

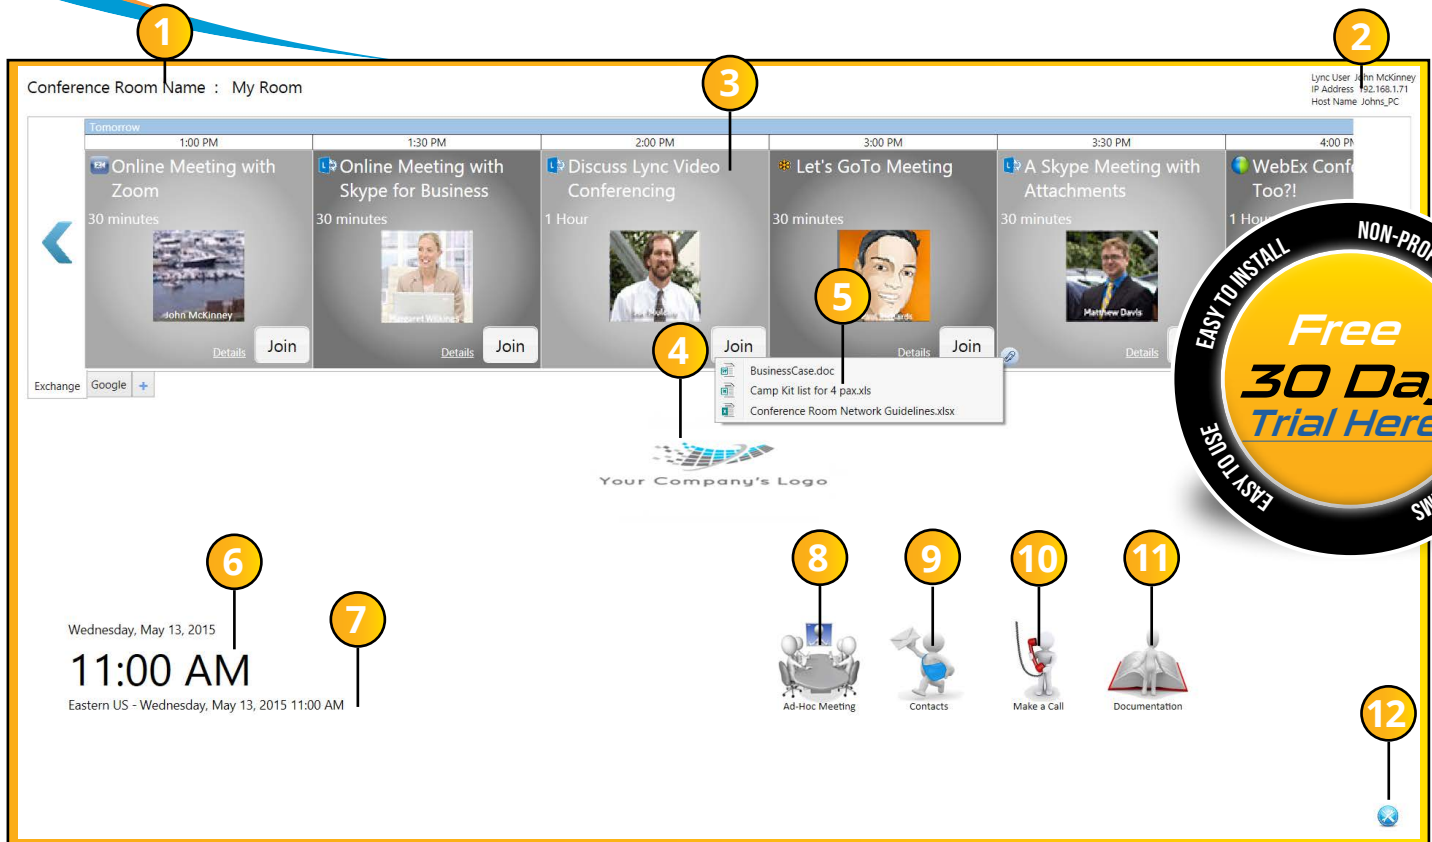

Locked Down Mode

Unifyfy leverages deployment technologies that are designed to work in a corporate environment providing as much control to corporate administrators as possible. Unifyfy is using the native Skype for Business SDK.

Deploy a standardized solution in locked down mode with Windows 8.1 Industry Pro or Enterprise. Contact us to learn more about "Enterprise Considerations" for Unifyfy.

TECHNOLOGIES

Your Conference Room Dashboard

1. A configurable name for this specific conference room.

2. Informational block. The logged in user, this machines IP address and the machine ID.

3. The schedule bar is the heart of Unify. It is where all scheduled meetings regardless of provider are displayed and can be interacted with. It is driven from Exchange and/or Google Calendar and can recognize and launch most meeting providers. You can also view details of the meeting by clicking Details. Joining a meeting is done with a single click of touch.

4. Place your own logo here to brand your Unify experience.

5. Unify supports Exchange attachments. The meeting scheduler will have the option to password protect attachments. Attachments can be opened by clicking the paperclip icon and entering password if required.

6. Locales: This displays the current date and time derived from the Windows settings.

7. Displays the date and time for up to 10 separate locales.

8. Launch a ad-hoc Skype for Business video call.

9. Contacts allows you to search your organizations directory. From here you can IM and call directly.

10. If your organization has Skype for telephony integration this feature will allow you to place a phone call.

11. Unify ships with standard documentation. You may customize this button to direct to your documentation.

12. This buttons allows entry to the configuration module of Unify. It also provides On/Off and reboot for your machine in locked down mode.
